

State Totals

Figure 4.

Figure 5.

School Location	K-6	School Location	7-12
Playground/Playfield	71.0%	Gymnasium	29.2%
Classroom	6.2%	Athletic Field	16.2%
Gymnasium	4.2%	Classroom	10.2%
Sidewalk/Stairs/Ramp	3.7%	Corridor	8.0%
Doorway	3.1%	Shop	5.7%

Figure 5 shows the most common locations of injury on campus in grades K-6 and 7-12. Note the different locations for both age groups.

Figure 6.

School Activity	K-6	School Activity	7-12
Playing on Bars	19.8%	Classroom activity	13.1%
Running	17.4%	Basketball	12.3%
Walking	9.0%	Walking	11.0%
Soccer	4.4%	Roughhousing	6.7%
Basketball	4.1%	Running	5.7%

Figure 6 shows the most common activities during which injury occurred for grades K-6 and 7-12. Note the different activities for both age groups.

Note: For the purpose of this report, the category "Other" in Figures 5 and 6 was omitted whenever it appeared, as it was not specific enough to assist with injury prevention measures.

Injury Times

Injuries occur at different rates throughout the school day and frequencies differ by grade level.

Injuries in grades K-6 peak during recess and lunch break, while injuries in grades 7-12 are more evenly distributed throughout the day.

It is important to report all injuries accurately because they contribute to liability, medical costs and absenteeism.

Figure 7.

Note: If your district numbers differ significantly from state averages shown on the insert, consider:

1. whether the area of injury distribution may be a result of your reporting practices; or
2. whether a review of your Student Injury Report forms would help you determine why the differences exist.
